Installation Guide of untitled3 webserver

Pre Requisit

Install java version 1.6.0 build 43 or higher

Download Maven : apache-maven-3.0.5-bin.tar.gz

Unzip maven in your developpement directory the maven extract dir will be called <MVN_HOME>

Getting source code

```
git clone https://github.com/cescoff/valtech.git
```

Building the application

```
cd valtech
export PATH=$PATH:<MVN_HOME>/bin
mvn clean install
```

Starting the server

```
cd core
mvn clean install exec:exec
```

Changing server configuration

In your web browser type : http://localhost:8080/path/to/toto.html
If you want to add files to the web server put them in the www-data of the valtech repository clone

If you want to change configuration edit the file configuration/default.xml in the valtech repository clone (it needs a server restart)
